**DETAILED ACTION**

***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-7 are rejected under 35 U.S.C. 102(e) as being anticipated by Allen et al.

Allen discloses a load carrier arrangement comprising:

- A hub (See Appendix) coupled between a support member (12) and a load carrying member (See Appendix);
- The hub has a socket formed therein;
- The load carrying member has an insertion portion and a load carrying portion with an angle interposed there between forming non-parallel orientations;
- The insert portion is twistably positioned in the socket;
- The angle interposed between the insertion portion and load carrying portion is approximately 45 degrees;
- The load carrying member is constructed from cylindrically-shaped tubing having a bend therein; and
- The support member is pivotally connected to the hub.

*Allowable Subject Matter*

3. Claims 8-20 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

*Conclusion*

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Allen, Nusbaum, Newbold et al., Blackburn et al., Prosen Hannes et al., and Piretti are cited for load carrier arrangements.
